

The EventCatcher Application and Cisco Sensors

Marilyn Leary

In the modern networked world, secure networks cannot be taken for granted. Comprehensive network security is part of the solution to this problem, and network intrusion detection and prevention systems are an integral part of the security solution. The ability to provide timely notification of critical alerts is a valuable addition to the sensors, and this document introduces a Java application that allows the user to view sensor alerts.

Table of Contents

The Cisco IPS and CX Sensors	1
The EventCatcher Application	3
Downloading and Installing Java Development Kit	6
Downloading and Compiling EventCatcher Application	7
Running EventCatcher From the Command Prompt	9
Additional Parameter Options	10
Event Type Values and Definitions	12
Sample Alert	13
Glossary of Terms	14
Bibliography	16
